PORCELAIN COBBLESTONE RANGE

Tiles, Pavers & Blocks

Taking inspiration from the classical elegance of natural stone cobbles, Archatrak porcelain cobblestones faithfully replicate the unique coloring, texture and style of centuries old cobblestones, but their consistent size, shape and thickness enable faster, simpler installation.

With three distinct styles and a range of rich, solid colors, Archatrak porcelain cobblestones offer an exceptional opportunity to create paving with character and style for pedestrian walkways, driveways, plazas and patios, large or small.

Cobblestone Tiles resemble traditional hand hewn cobbles with hammered edges, textured surface and a somewhat rustic appearance. Available in two sizes, 8" x 8" or 8" x 12" which can be combined to form several different layouts.

Cobblestone Pavers combine the ease of installation of a 24" x 24" paver but still display the character and charm of small cobblestones, offering an unsurpassed opportunity to create a cobblestone look on large pedestrian walkways.

Smaller in size at just 4" x 4", **Cobblestone Blocks** closely resemble split basalt blocks but are perfectly consistent in size and height. At 2¹/₂" thick, these blocks are especially suited for areas subject to vehicular traffic.

INSTALLATION & LAYING

Cobblestone Tiles

For commercial, high traffic applications, cobblestone tiles should normally be set in mortar over on a reinforced concrete base and grouted. However for some residential applications, they can also be laid over an interlocking panel system such as that supplied by UltraBaseSystems. This system requires minimal ground excavation but creates a structurally sound base capable of supporting the weight of vehicles. Laying directly over sand/gravel is not normally recommended because of possible movement or instability of the tiles.

Cobblestone Pavers

24" x 24" cobblestone pavers should always be laid over a reinforced concrete base using mortar or an appropriate exterior adhesive. The gaps between the pavers are filled with grout to match the color of the simulated grout on the surface of the pavers. The reinforced concrete base must be installed in accordance with relevant codes and standards with expansion joints provided as required. Pavers must not be installed across expansion joints.

Cobblestone Blocks

For all vehicular applications, cobblestone blocks must be laid over a concrete aggregate base with mesh reinforcing, specifically designed for the type of traffic and the anticipated loading. The blocks can be either dry laid on a bed of sand spread over the concrete base and joints filled with polymeric sand, or for maximum stability over time, laid on a bed of cement mixed with sand and joints filled with either polymeric sand or cement based grout.
